LAB 2• Topology-• Procedure

- i) Place one router (Router - PT) and 2 end devices.
- ii) Connect the end devices to the router with appropriate cable.
- iii) Set IP address and default gateway to each End device.
- iv) Configure the router using the CLI.  
put IP address same as the respective gateway address of the desktop.
- v) Select PC0 and open the command prompt and ping the PC1 using its IP address.

### Observations:

PC1 replies from 10.0.0.20 Bytes = 32 time = 10

PC1 replies from 10.0.0.20 Bytes = 32 time = 10

PC1 replies from 10.0.0.20 Bytes = 32 time = 10

PC1 replies from 10.0.0.20 Bytes = 32 time = 10

Number of packets sent = 4

Number of packets received = 4

Loss = 0%

Each data packet sent across the network contains contains address information that a router can use to destination are on the same network.

### CLI Commands:-

enable

config t

interface fastEthernet 0/0

ip address 10.0.0.10 255.0.0.0

no shut
